

Dear Customer,

Please allow me to take this opportunity to introduce myself. My name is Jubenal Ambris, and I am the sales manager for Newby Rubber, Inc. Founded in 1958, we are a rubber manufacturing facility which produces a wide array of rubber products for industries such as agriculture, food processing, waterworks, pump, oilfield and the military, to name a few.

Situated on four acres, our manufacturing plant has recently expanded to an 80,000 square foot facility within 5 buildings.

Compression and transfer molding is done in one of our 37 steam and electric presses, ranging in platen-size from 6" x 6" to 48" x 48" capable of closing pressures up to 450 tons. The unique automation of our 17 injection molding presses allows us to offer extremely competitive pricing on relatively small orders.

Our engineering department can design your tooling and have it machined in our on-site tool and die shop, enabling us to keep cost low and minimize lead time from design to production.

As we place quality as our top priority, our experienced technicians utilize our state-of-the-art lab in order to monitor every aspect of production. This ensures that our customers receive products that adhere to the most stringent quality guidelines.

Your association with Newby Rubber, Inc. allows you to benefit from our many years of experience as well as the expertise of a knowledgeable staff. We strive to combine the prompt and personal service of a small family business with the efficiency and competitive pricing of a large corporation.

We look forward to hearing from you and being able to be of service.

Sincerely,

Jubenal Ambris

Sales Manager
